

		ODU
U POWER	Steady on	Power on
	Off	No power supply
() INTERNET	Steady on	Internet available
	Off	Internet unavailable
	Blinking (500ms interval)	Searching network
SIM	Steady on	SIM ready
	Off	No SIM detected
SIGNAL	Green	Signal strong
	Yellow	Signal good
	Red	Signal weak
	Blinking Green and Red	Firmware upgrade

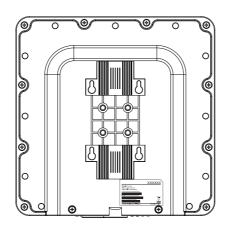

# **Configure the CPE**

### Login to the website

Use a browser to access the management web page to configure and manage the CPE. The following procedure describes how to use a computer running

Windows 7 or above version and Internet Explorer to connect to the CPE webpage.

Step 1 Connect to the CPE correctly. Step 2 Start Internet Explorer, type http://192.168.225.1 in the address bar, and press Enter.

Step 3 Enter the user name and password, and click Log In. You can connect to the management web page after the password is verified.

### **Configuration of LTE**

Step 1 Connect to the CPE correctly. Step 2 Go to the management website. Step 3 Choose Settings  $\rightarrow$  Network  $\rightarrow$  LTE Settings. Step 4 Set the connection mode and scan mode

LTE Settings				
	Settings			
	Status	Connected		
	Connect Method	Auto		
	40 Status			
	DLMCS	0		
	UL MCS	0		
	DL Frequency	874.2MHz		
	UL Frequency	829.2MHz		
	Band	5		
	Bandwidth	10MHz		
	RSRP0	-87dBm		
	RSRP1	-95dBm		
	RSSI	-60dBm		
	RSRQ	-9dB		
	SINR	4dB		
	CINRO	3.6dB		
	CINR1	3.3dB		
	TX Power	-55.0dBm		
	PCI	119		
	Cell ID	23		

The default setting is automatic connection and full band scanning, if you want to connect to the LTE network according to your needs, you can set the connection mode as manual, and simply scan a specific band.

Please make sure that you are familiar with all accident prevention and safety procedures necessary for working at height and with electricity before starting to install the device. DO NOT install the ODU during a lightning storm.

Make sure the ODU is turned off before you insert your SIM card. It is recommended to NOT connect the PoE cable when you do this step. Otherwise, the

Step 2 Connect the end of the CAT5e (or above) Ethernet cable to

3

### **Choose a location**

The ODU can be mounted on an antenna pole or mast or on a wall using the supplied mounting bracket.

 $\cdot$  Choose a mounting point that is sturdy enough to hold the ODU, even during high winds.

· When choosing a location to install the ODU, please note that the ODU's front panel should point towards your service provider's nearest base station. You do not need to be able to see the base station from the ODU's position. However, if you experience difficulties with signal reception, a Line of Sight (LoS) connection may produce better results.

· It is suggested that you transport the ODU to its intended installation location in its original protective package.

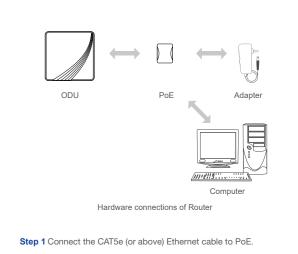

To obtain the best radio signal level and connection quality, the CPE antenna should be aimed towards the best eNB or BS directly.To search for the best eNB direction, the user can rotate the CPE slowly and tilt CPE slightly to find the best signal direction. The CPE radio signal strength level can be observed from the RF LEDs mounted on the lower panel as shown below. Different colored LEDs represent different signal strength.

### Connect the PoE

Place a CAT5e (or above) Ethernet cable (not included) from the location of your intended Router to the desired PC location.

If you intend to use cable clamps or other methods to secure the cable, do not tighten them until you finish installing the Router and ODU.

6

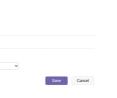

Do not connect to a computer or switch directly to the PoE port due to high PoE power.

Step 2 Connect the power adapter to the PoE injector. The POWER LED turns on a solid green-vellow once connected. Step 3 Connect the included Ethernet cable from the computer to one of the Router's Ethernet ports.

### LED Behavior

When setting up the Outdoor Unit, the LED will have the following behavior.

6

## **Frequently Asked Questions**

### The POWER indicator does not turn on.

 $\cdot$  Make sure that the power cable is connected to the PoE, and the CPE is connected to the right port of the PoE.  $\cdot$  Make sure that the power adapter and PoE are compatible with the CPE.

### Fails to Log in to the web management page.

 $\cdot$  Make sure that the CPE is powered on. · Verify that the CPE is correctly connected to the computer through a network cable.

If the problem persists, contact authorized local service suppliers.

### The CPE fails to search for the LTE network.

 $\cdot$  Check that the power adapter and PoE have connected to the CPE properly · Check that the CPE is placed in an open area that is far away from

obstructions, such as concrete or wooden walls. · Check that the CPE is placed far away from household electrical appliances that generate strong electromagnetic field, such as microwave ovens, refrigerators, and satellite dishes.

If the problem persists, contact authorized local service suppliers.

### The CPE power adapter has overheated

· The CPE is heated after being used for long time. Therefore, you must turn off the CPE when not you are using.  $\cdot$  Check that the CPE is properly ventilated and protected from direct sunlight.

#### The parameters are restored to default values.

· If the CPE powers off unexpectedly while being configured, the parameters may be restored to the default settings. · After configuring the parameters, download the configuration file to quickly restore the CPE to the desired settings.
